☐ Further documents are listed in the continuation of Box C.

☐ See patent family annex.

\* Special categories of cited documents:  
 "A" document defining the general state of the art which is not considered to be of particular relevance  
 "E" earlier document but published on or after the international filing date  
 "L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)  
 "O" document referring to an oral disclosure, use, exhibition or other means  
 "P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention  
 "X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone  
 "Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art  
 "&" document member of the same patent family

[Subject of search concerning claims 1 to 19]

As "a magenta dye having an absorption peak in the spectral region of from 500 to 580 nm and an oxidation potential nobler than 1.0V (vsSCE)", nothing but a magenta dye represented by the general formula (1) as set forth in claim 6 wherein A is a pyrazole ring having benzothiazole, t-butyl and cyano groups and G is an amino group is specifically supported by the description. No other magenta dyes are specifically disclosed or supported.

Accordingly, inks for inkjet printing using magenta dyes other than the one specifically disclosed in the description are not considered as being fully supported by the description. Thus, no meaningful international search can be made thereon.

Such being the case, the ink for inkjet printing using the magenta dye represented by the general formula (1) wherein A is a pyrazole ring having benzothiazole, t-butyl and cyano groups and G is an amino group alone is regarded as the subject of the search, from among those as set forth in the above claims.
